

Software Engineer specializing in backend and distributed systems, with hands-on experience building low-latency, real-time, and cloud-native applications. Strong in Java, Spring Boot, system performance optimization, and production-grade APIs.

SKILLS

Programming Languages	Java, Javascript, Typescript
Backend	Spring Boot, Spring Security, Spring Data JPA, Node.js, Express.js, RESTful APIs, Microservices, PostgreSQL, Oracle SQL, MySQL, MongoDB, Redis
Frontend	React.js, Next.js, React Native (Expo), HTML5, CSS3, Tailwind CSS
DevOps & Cloud	Docker, Linux (Ubuntu), Nginx, CI/CD (GitHub Actions), OpenShift, AWS - EC2, S3, IAM
Tools & Testing	Git & Github, Bitbucket, Jira, Maven, Postman, Swagger, IntelliJ IDEA, VS Code, JUnit, Mockito

WORK EXPERIENCE

Software Engineer LTIMindtree	Jun 2024 — Present Pune, MH . Onsite
- Led backend development for BRCC Command Center, a GenAI-powered governance reporting platform serving 5+ enterprise units at Citi, generating PowerPoint decks on-demand and reducing manual effort by 60% through metadata-driven architecture and Aspose.Slides utilities for processing slide elements like textboxes, tables, and images. - Engineered and optimized production-grade RESTful APIs in Spring Boot, implementing non-blocking asynchronous execution with CompletableFuture and Redis cache to cut response times by 80% for high-volume governance workflows. - Collaborated with cross-functional team (frontend, QA, product) to integrate features, debug complex issues, and ensure regulatory compliance, reducing release-cycle defects by 35% and improving SIT/UAT reliability. - Managed CI/CD deployment pipelines via Harness and OpenShift, incorporating health checks and rolling updates to boost deployment consistency by 20% and accelerate validation across testing environments. - Promoted from Graduate Apprentice after 4-month Java Full-Stack training (Core Java, Spring Boot, Spring Security, Angular); earned OCJP-11 with distinction and gained hands-on project experience.	
Frontend Developer MakerStudio	Mar 2024 — Jun 2024 Chennai, TN . Remote
- Orchestrated the development of cross-platform mobile applications utilizing React Native, Expo, and TypeScript, implementing efficient code structure and reusable components, resulting in a 20% increase in code reusability. - Designed and delivered responsive, visually consistent user interfaces using NativeWind and Tamagui-inspired frameworks. Collaborated closely with the team lead and backend engineers to convert Figma designs into consistent, production-ready UI components, improving design fidelity and reducing rework by 40%.	

PROJECTS

Evaluet AI-Powered Voice Interview Platform	Dec 2025 — Present
- Built a real-time, voice-first AI interview platform using React Native (Expo) and FastAPI, supporting continuous 15–20 min interview sessions, bi-directional WebSocket streaming, and sub-second UI updates across audio, video, and transcript layers. - Implemented a low-latency streaming audio pipeline (250–400ms turn latency) using Deepgram Flux (STT), Groq LLM streaming, and Deepgram Aura-2 (TTS), processing 100ms PCM chunks with silence keep-alives and turn-boundary detection. - Engineered a synchronized AI interviewer video system with seamless idle/speaking transitions, eliminating visual artifacts during frequent voice-driven state changes and improving perceived interview realism. - Automated post-interview evaluation and feedback delivery by generating structured hiring reports (score + markdown) from full transcripts, with fault-tolerant JSON parsing, database persistence, and email delivery within seconds of session completion.	
CloudNest Distributed Cloud File Storage Platform	Oct 2025 — Dec 2025
- Built a full-stack cloud file management system with a clean Next.js App Router interface for file uploads, real-time progress, previews, filters, and public link sharing. Implemented secure authentication in Spring Boot, including JWT login, email-based password reset, and Nginx-backed authorization, reducing unauthorized access attempts by 99.99%. - Architected a microservices setup using Docker, Nginx Gateway, Postgres, S3-compatible storage with signed-URL uploads, and a worker service powered by a Redis message queue handling background thumbnail generation. Increased throughput of Spring Boot containers by 30% using layered JARs and JVM memory tuning for performance on lightweight VPS. - Composed a robust CI/CD workflow enabling safe rolling updates, automated SSL, health checks, and structured routing. Added monitoring using Dozzle and UptimeRobot, improving debugging and uptime visibility by 60%.	

EDUCATION

Bachelor of Technology in CSE, MIT ADT University	Jul 2023
